

AWP-158

The AWP-158 is an electric polishing tool designed for polishing, shaping, core drilling and light grinding. This 7.8 amp, 800-watt, 3,000 RPM machine is a powerful workhorse suitable for use in the shop or on the job site. The AWP-158 features several improvements over previous generations of polishers. In addition to the increased power and spindle speed, there are two types of handles included: a side handle for edge profiling and polishing and a "C" handle for core drilling and flat surface polishing. There is a flat polishing caster designed to improve stability during scratch removal operations for better final finish. The AWP-158 is double insulated and equipped with a power cord that is 10' long and has a built-in GFCI (Ground Fault Circuit Interrupter) for safety. Also for safety and abrasive longevity, the polisher has a center water-feed and water supply with convenient garden hose attachment. All these components are packed in a handy carrying case suitable for transporting and storing the AWP-158 and its accessories.

Designed to perform polishing and several other operations, the AWP-158 is a must-have tool for all fabricators/installers of granite, marble, engineered stone and porcelain slab, and all tile contractors.

Specifications:	Equipment Included:
Rating.....110 Volts	• Ground Fault Circuit Interrupter
Amperage..... 7.8	• Water Valve and Hose
Power.....800 W	• Faucet / Garden Hose Adapter
Speed.....3,000 RPM	• Wrenches
(no load)	• C-Handle
Weight.....6 lbs / 2.72 kg	• Side Handle (reversible)
Spindle.....5/8"-11	• Extra Carbon Brush Set
	• Caster Assembly

**Heavy Duty
Carrying Case Included**

Side Handle
For a steady grip
