HEPA Filter, Fleece Filter Bag and Waste Bag  
for HEPA1035 & HEPA1050 Models

*Main Filter (HEPA 13)*  
MSRP \$77.05

*Fleece Filter Bag (5pcs)*  
MSRP \$24.71

*Waste Bag (5pcs)*  
MSRP \$57.31

### 1. **Fleece Filter Bag:** Part No. 102066 (5pcs)

- The Fleece Filter Bag is the standard bag that comes with HEPA Vacuum and is designed for the primary stage of filtration that also enhances the long-life expectancy of HEPA vacuum.
- The fleece bag is used to protect the main filter from getting dirty. It filters and collects the main dust.
- The disadvantage is that the pores of the fleece bag can get clogged over time, necessitating a replacement; however, it usually becomes full before it gets clogged.

### 2. **Waste Bag:** Part No. 118138 (5pcs)

- The Waste Bag is designed for hazardous dusts such as Lead so that it doesn't contaminate the canister.
- The waste bag collects dust in a separate bag to prevent dust from escaping during handling. For instance, handling a full fleece bag might release dust if the bag is dropped or mishandled.
- When using the waste bag, the filter cleaning operates similarly to using the machine without any bag. The waste bag allows easy dust disposal without having to carry the entire tank.
